Summary

Full-stack software engineer with 3+ years of experience, focused on cloud infrastructure and DevOps. Shipped production systems with React, Next.js, Spring Boot and NestJS; built AWS/Kubernetes platforms with Terraform, ArgoCD and CI/CD pipelines. Experienced working with international, cross-cultural teams.

Work Experience

Software Engineer / DevOps Engineer, Onify Company Limited

May 2025 – present

Internal Multi-Tenant Kubernetes Platform [Terraform, AWS EKS, ArgoCD, GitHub OIDC]

- Designed and built a shared multi-tenant Kubernetes platform on AWS EKS from scratch with Terraform, onboarding 3 application tenants onto a single cluster with namespace-level isolation via a reusable tenant module
- Implemented GitOps delivery with ArgoCD (App-of-Apps) and Image Updater — git push → ECR build → automated rollout — and eliminated static AWS credentials by adopting EKS Pod Identity, IRSA, and GitHub Actions OIDC
- Standardized ingress and DNS with a wildcard ACM certificate, a shared per-environment ALB, and wildcard Cloudflare DNS, and centralized secrets in 1Password via External Secrets Operator, so onboarding a new application requires zero certificate, DNS, or secrets work
- Cut the platform's cloud costs by ~51% by retiring NAT gateways, consolidating ALBs, adding an S3 gateway VPC endpoint, and right-sizing node groups

Retail Client Website with Headless CMS [Astro, Payload CMS, PostgreSQL]

- Develop and maintain a retail client's website with a headless CMS (Astro, Payload CMS, PostgreSQL), deployed as a tenant on the internal Kubernetes platform

Cloud Infrastructure & DevOps [AWS, DigitalOcean, Terraform, GitHub Actions, Vercel]

- Provision and manage cloud infrastructure on AWS (VPC, ECS, ECR, RDS, ALB, Route53) using Terraform for repeatable, version-controlled deployments across 3 environments (Staging, UAT, Production)
- Manage DigitalOcean infrastructure (App Platform, managed Postgres, Spaces + CDN) with Terraform
- Build and maintain CI/CD pipelines with GitHub Actions, enabling zero-downtime deployments with 3–5 releases per week
- Deploy Next.js applications on Vercel and manage application secrets securely

Government Social Welfare Platform [Kubernetes, GitHub Actions, GitLab CI, Docker, ArgoCD]

- Design and maintain CI/CD pipelines with GitHub Actions and GitLab CI for 5 microservices (Spring Boot + React), using change detection to selectively build and deploy only affected services
- Implement GitOps workflow with ArgoCD and a dedicated infrastructure repo, automating Kubernetes manifest generation and achieving zero-downtime deployments
- Build multi-stage Docker images for Java and React services, splitting dependency installs into cached layers and reducing build times by ~70%
- Manage GitHub-to-GitLab monorepo sync using git subtree, maintaining separate service repos for controlled release branching across Dev, UAT, and Production
- Set up HTTPS reverse proxy bridging for secure communication between internal services and external government APIs

Project Budget & Payment Management Platform [React, NestJS, TypeORM, PostgreSQL]

- Develop full-stack features on a NestJS + TypeORM + PostgreSQL backend and a React frontend for project budget planning, disbursement approvals, and payment reconciliation, within a 15+ member team
- Implement multi-currency contract payments and disbursements (THB/LAK) with exchange-rate handling and source-of-fund payment splitting
- Build and maintain budget-tracking logic (used/remaining budget calculations, over-budget guards on installments), dashboard charts and widgets, and reusable form validators
- Resolve role- and permission-related defects in the platform's row-level-security authorization system, including external-user access across backend and frontend

AI Bill of Lading Reconciliation System [Python, Gemini, Docling OCR]

- Tune the AI extraction and comparison engine (Gemini Vision + Docling OCR) that reconciles draft Bills of Lading against

shipping particulars across 22 fields and returns a mismatch-highlighted PDF

- Author and tune 100+ carrier-specific comparison templates and refine field-matching rules (consignee/notify-party equivalence, vessel vs pre-carriage swaps, weight and package-count normalization) to reduce false mismatches
- Improve PDF mismatch highlighting for documents with multiple containers and seals

Hospital Information System (HIS) *[Angular, Spring Boot, Node.js]*

- Develop Angular frontend features based on Figma designs from the UX/UI team, implementing complex business logic defined by Business Analysts
- Manage and maintain microservices backend built with Spring Boot and Node.js
- Collaborate within a 15-member cross-functional team including frontend developers, backend engineers, BAs, and UX/UI designers

Developer Intern, Bluebik Vulcan Company Limited

Nov 2024 – Mar 2025

Legal Documents Management System *[ReactJS, NestJS, TypeScript]*

- Collaborated with Systems Analysts to design features and translate requirements into implementation
- Built reusable UI components to improve consistency and reduce duplication across the application
- Wrote comprehensive unit tests to ensure code reliability and prevent regressions

Full Stack Developer Intern, Trienpont International

Apr 2024 – Sep 2024

Human Resource Management System *[Next.js, Supabase, TypeScript]*

- Gathered requirements directly from HR stakeholders and collaborated with Senior Engineers to architect the solution
- Designed optimized PostgreSQL schema with stored procedures for complex query logic
- Built a responsive, server-side rendered UI for improved performance and SEO
- Developed a custom Slack bot for daily standup reporting and leave requests, enabling staff to interact with internal tools directly from Slack

Crypto Game Reviews & News Platform *[Next.js, Strapi, TypeScript]*

- Maintained and enhanced a legacy codebase while improving page load performance and implementing new client-requested features

E-Commerce Product Data Scraper *[JavaScript]*

- Reverse-engineered website APIs and built an automated data pipeline with cron jobs to extract and export product data to CSV for analytics

Full Stack Developer Intern, Computer Center, Burapha University

Apr 2023 – Mar 2024

E-Office Platform: 3 Internal Systems (User Management, Help Desk, IT-Clinic) *[NestJS, VueJS, TypeScript]*

- Independently built three internal web applications end-to-end after gathering requirements from university administrative staff
- Integrated APIs with the university's complex legacy user database, ensuring secure access and optimized query performance
- Delivered all three systems on schedule as the sole developer, resolving technical challenges through self-directed research

Skills

Languages: TypeScript, JavaScript, Go, Java, HTML, CSS, SQL

Frameworks & CMS: NestJS, Spring Boot, Echo, Next.js, ReactJS, VueJS, Angular, Astro, Payload CMS

Database: PostgreSQL, MySQL, Oracle, Redis

DevOps & Cloud: AWS, DigitalOcean, Kubernetes, ArgoCD, Docker, Terraform / OpenTofu, GitHub Actions, GitLab CI, Cloudflare, Vercel, nginx

Other: Git, Tailwind CSS, Supabase, Jira

Education

Burapha University, BS in Computer Science (First Class Honors), GPA 3.86

2021 – 2025

- **Relevant Coursework:** Web Development, Database Systems, Data Structures and Algorithms, Cloud Computing, Data Engineering

Languages: Thai (Native) | English B1 (TOEIC 690)
