Summary

Full-stack software engineer with 3+ years of experience, focused on cloud infrastructure and DevOps. Shipped production systems with React, Next.js, Spring Boot and NestJS; built AWS/Kubernetes platforms with Terraform, ArgoCD and CI/CD pipelines.

Work Experience

Software Engineer / DevOps Engineer, Onify Company Limited May 2025 – present

- Designed and built a multi-tenant Kubernetes platform on AWS EKS from scratch with Terraform, onboarding 3 application tenants onto a shared cluster with namespace-level isolation via a reusable tenant module
- Implemented GitOps delivery with ArgoCD (App-of-Apps); eliminated static AWS credentials via EKS Pod Identity, IRSA, and GitHub OIDC; centralized secrets in 1Password and standardized ingress (wildcard ACM certificate, shared ALB) so new applications need zero DNS or certificate work
- Cut the platform's cloud costs by ~**51%** by retiring NAT gateways, consolidating ALBs, adding an S3 gateway VPC endpoint, and right-sizing node groups
- Develop and maintain a retail client's website with a headless CMS (Astro, Payload CMS, PostgreSQL), deployed as a tenant on the platform
- Provision and manage cloud infrastructure on AWS (VPC, ECS, ECR, RDS, ALB, Route53) and DigitalOcean (App Platform, managed Postgres, Spaces + CDN) with Terraform; CI/CD with GitHub Actions enables zero-downtime deployments
- Built CI/CD for a government social welfare platform of 5 microservices (Spring Boot + React) with change detection to build and deploy only affected services; optimized Docker layer caching, reducing build times by ~**70%**
- Develop full-stack features for a project budget & payment management platform (React, NestJS + TypeORM, PostgreSQL): multi-currency contract payments, payment reconciliation, budget-tracking calculations, dashboard charts, and role-based permission fixes
- Tune the AI extraction engine (Gemini Vision + Docling OCR, Python) of a Bill of Lading reconciliation system, authoring 100+ carrier-specific templates and refining field-matching rules to reduce false mismatches
- Develop Angular frontend features and maintain Spring Boot / Node.js microservices for a Hospital Information System within a 15-member cross-functional team

Developer Intern, Bluebik Vulcan Company Limited Nov 2024 – Mar 2025

- Built reusable UI components and comprehensive unit tests for a legal documents management system (ReactJS, NestJS, TypeScript), collaborating with Systems Analysts to translate requirements into features

Full Stack Developer Intern, Trienpont International Apr 2024 – Sep 2024

- Built an HR management system (Next.js, Supabase): gathered requirements from HR stakeholders, designed an optimized PostgreSQL schema with stored procedures, and delivered a responsive server-side rendered UI
- Developed a custom Slack bot for daily standup reporting and leave requests, enabling staff to interact with internal tools directly from Slack

Full Stack Developer Intern, Computer Center, Burapha University Apr 2023 – Mar 2024

- Independently built three internal web applications end-to-end (NestJS, VueJS, TypeScript) as the sole developer, integrating with the university's legacy user database and delivering all systems on schedule

Skills

Languages: TypeScript, JavaScript, Go, Java, SQL, HTML, CSS

Frameworks & CMS: NestJS, Spring Boot, Echo, Next.js, ReactJS, VueJS, Angular, Astro, Payload CMS

DevOps & Cloud: AWS, DigitalOcean, Kubernetes, ArgoCD, Docker, Terraform / OpenTofu, GitHub Actions, GitLab CI, Cloudflare, Vercel, nginx

Databases: PostgreSQL, MySQL, Oracle, Redis

Other: Git, Tailwind CSS, Supabase, Jira

Education

Burapha University, B.S. in Computer Science - First Class Honors, GPA 3.86

2021 – 2025

Languages: Thai (Native) | English B1 (TOEIC 690)
